

# LTl Truck Loads

Create the loads that you want to LTL together. Make sure they are in A status.

From the Load browser screen, highlight each load and press the space bar to mark it. The example below shows 3 loads marked. \* Note: if you have custom load colors turned on, you will need to call support to edit your dpcolors.dbf file)

After you have 'marked' each one that you want to LTL together, press the Manifest button. It does not matter which one of your marked loads you are highlighted on when you press the Manifest Button.

Press F4 to add a new manifest.

It will prompt you for each drop. Typically, you will answer yes, although, sometimes if they are the same location, you may opt to say No for the miles calculation.

Now that the picks and drops from the loads you marked have all been added to the same manifest, you can reorder them to match how the driver will deliver them.
