TMS Auto Rating

How to setup Stop Charges

The formula for automatic pick and drop charges is to be entered in the field marked User Defined Rate in the tariff.

Examples:

STOPCHRG(2,2,50) - this will charge $50 for each pick and drop after the first pick/drop

STOPCHRG(1,1,50) - This will charge $50 for all picks and drops *including* the first one

STOPCHRG(2,2,40,50) - This will charge $40 per pick after the first pick and $50 per drop after the first drop

STOPCHRG(2,2,0,35) - This will charge $0 for pick charges and $35 for all drops after the first drop

STOPCHRG(2,2,10,35) - This will charge $10 for each pick after the first one and $35 for all drops after the first one

The formula breaks down like this:

STOPCHRG(2, 2, 10, 35)
A   B C D   E

A - the Function
B - pick number to start charging for
C - drop number to start charging for
D - amount to charge per pick
E - Amount to charge per drop
